OPENJARVIS

FREE FIRE CRAFTLAND KNOWLEDGE REPOSITORY

Official-source research bundle · Version 2 · 06 November 2026

STATUS: PARTIAL RESEARCH SNAPSHOT — NOT COMPLETE
This file does not claim that all 42 modules, all API signatures, all parameters/return types, or all official images have been fully extracted. Unverified fields are explicitly marked. No fabricated screenshots are included.

Purpose

A structured starting repository for OpenJarvis to understand Garena Craftland visual scripting and APIs. Mobile and PC documentation are kept distinct. The official Garena pages remain the authority for current signatures and compatibility.

What is included

- Verified official 42-module index.
- API-name inventories extracted from the official STD Library and List module pages.
- Selected individual API pages with captured parameters, return/output details, and compatibility.
- Official Type, Enum, Event, Mobile tutorial and PC manual links.
- Explicit audit gaps and image provenance policy.

1. Official 42-module index

The Garena index reports 42 modules. The sequence below follows the official index.

#	Module	#	Module
1	STD Library	22	Profile
2	List	23	Airdrop
3	Map	24	Global
4	Math	25	Player
5	Strings	26	Team
6	Convert	27	Mechanism Parameters
7	AI	28	Workflow
8	Read Table Content	29	Physics
9	Scene	30	Camera
10	Items	31	Minimap
11	Combat	32	Game Results
12	Safe Zone	33	Input System
13	Checkpoint	34	Collection
14	HUD	35	Economy
15	Property Formula	36	Data Storage
16	Level Object	37	Football
17	Chat Channel	38	Morph
18	Playable	39	Dyeing
19	Animation	40	Game Time
20	Behavior Tree	41	Performance
21	Avatar	42	Social

2. Inner API names — official module pages

List module: the official page lists the following API names and short descriptions. This is an API-name list, not a complete signature catalogue.

Length, Obtain, Set, Append, Remove At, New, Contain, Append Range, Remove, Index Of, Last Index Of, Clear, Reverse, Clone, Insert, Shuffle, Is Equal, Max, Min.

Official page: https://ffcraftland.garena.com/en/docs/module-2

STD Library: the official page includes a broad API catalogue. The following names were visible in the captured official page text; the full page may contain further or updated entries.

Get All Players, Get All Teams, Set All Players Move Status, Log Info, Break loop, Continue to next, Return, Wait For Next Frame, Wait for Millisecond, NOT, Color Get, Check null, Get Server Timestamp, Get Server Region, Set property, Get property, This Entity, Get global, Get Owner, Clone, SpawnNextWave, Get Type, Type Is, Is Sub Type Of, Has Component, Dispatch Event, Filter Entity, Add Script, Remove Script, Has Script, Destroy, Add Tag, Remove Tag, Has Tag, Set Active, Set Parent, Get Children, Get Child By Index, Get Child By Name, Get Parent, Clear All Children, Set Property Smoothly, Create From Prefab, Instantiate Prefab, Create Bot, Destroy Bot, Create Damage Num, Log Warning, Log Error, Upload Game Result, Add Component, Remove Component, Get Local Player, Broadcast Custom Event, Get Local Language, Capture Screenshot, Paste Component, Get Type Name, Set Material Property, Get All Spectators, Get Local Spectator, String To Big Float.

Official page: https://ffcraftland.garena.com/en/docs/module-1

3. Captured API signature samples

Only fields actually captured from the cited individual API pages are filled. A blank or 'not captured' value is not a claim that the API has no parameters or return value.

List — Length

Parameters: Not individually verified in this bundle
Return/output: Not individually verified
Server/Client: Module/API page says check per API
Platform: Module/API page says check per API
Audit: API name listed on official module page

List — Obtain

Parameters: Not individually verified in this bundle
Return/output: Not individually verified
Server/Client: Both Server and Client (module page pattern; verify API page)
Platform: Both Mobile and PC (module page pattern; verify API page)
Audit: API name listed; do not infer signature

Map — Obtain

Parameters: Map: Map; Key: Object
Return/output: Object (value)
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Verified from individual API page

Map — New

Parameters: Not shown in extracted page content
Return/output: Not shown in extracted page content
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Individual page confirms dictionary creation; signature not captured

Map — Set

Parameters: Not shown in extracted page content
Return/output: Not shown in extracted page content
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Individual page confirms API; signature not captured

Level Object — Create Level Object

Parameters: Position: Vector3; Level Object: Int
Return/output: Created Entity: Entity (output)
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Verified from individual API page

STD Library — Return

Parameters: Optional return data
Return/output: Returns to calling location; exact generic signature not captured
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Individual API page confirms behavior/platform

STD Library — Add Script

Parameters: Not captured in this bundle
Return/output: Not captured in this bundle
Server/Client: Both Server and Client
Platform: Both Mobile and PC
Audit: Individual API page confirms compatibility

STD Library — Paste Component

Parameters: Not captured in this bundle
Return/output: Not captured in this bundle
Server/Client: Both Server and Client
Platform: Only PC
Audit: Individual API page confirms PC-only

4. Reference types, events and enums

Garena exposes separate reference sections for API, Event, Type and Enum. These are not extra modules in the 42-module count.

Type Reference includes primitive types (Bool, Int, Float, Int64, Number, String, Color), data structures (List, Map), geometry (Vector2, Vector3, Quaternion, Bezier Curve), IDs/assets, Entities, Components, UI widgets, game objects, and specialized gameplay types.

Event Reference documents event triggers. The event must be supported by the script's attached entity/components; do not assume every event can attach to every entity.

Enum Reference is a separate official index. Individual enum members and their meanings still require extraction.

Type: https://ffcraftland.garena.com/en/docs/type
Event: https://ffcraftland.garena.com/en/docs/event/
Enum: https://ffcraftland.garena.com/en/docs/enum/

5. Mobile and PC documentation

Mobile Block Script tutorial: explains the editor, categories, block snapping, data sockets, compatible/incompatible types, deletion, variables and functions. One source page has a category-count inconsistency: its overview says six categories while its detailed list names seven (Incident, Entity, Game, Data, Logic, Variable, Function). This discrepancy must be preserved in the audit, not silently corrected.

Mobile tutorial: https://ffcraftland.garena.com/en/tutorial/cl/3

PC User Manual: separate documentation covering Basics, Scripts, Scenes & Levels, Interfaces, Other Modules and Templates.

PC manual: https://ffcraftland.garena.com/en/tutorial/fe/1
PC script notes: https://ffcraftland.garena.com/en/tutorial/fe/1-10/

Compatibility example: Paste Component is listed as Both Server and Client but Only PC. This demonstrates why platform compatibility must be checked per API, not inferred from its module.

API page: https://ffcraftland.garena.com/en/docs/api-1-951/

6. Official images — provenance

This bundle does not fabricate or AI-generate Craftland block screenshots. Garena's original tutorial pages contain screenshots and diagrams; use the pages below as the source of truth. The complete image files have not yet been extracted, catalogued, deduplicated, and mapped one-to-one to all blocks/APIs.

Mobile tutorial images: https://ffcraftland.garena.com/en/tutorial/cl/3
PC script images: https://ffcraftland.garena.com/en/tutorial/fe/1-10/
PC user manual: https://ffcraftland.garena.com/en/tutorial/fe/1

Image status: official image sources identified; full image extraction/audit incomplete. No generated illustration is labelled as an official image.

7. Audit gaps / completion criteria

1. Extract every API name from all 42 module pages.
2. Open each API detail page and record declaration, all inputs, types, descriptions, outputs/return types, side and platform.
3. Extract Event and Enum entries, including members and values where published.
4. Verify obsolete/deprecated APIs and replacement APIs.
5. Capture and attribute actual Garena screenshots, preserving page/source references and mapping each image to its relevant block/API.
6. Cross-check mobile documentation against PC documentation and record differences.
7. Only then label the repository COMPLETE.

8. Official source directory

Main 42-module index
https://ffcraftland.garena.com/en/docs/module-3
Official module index; 42 modules shown.

API reference index
https://ffcraftland.garena.com/en/docs/api
Official API documentation entry point.

STD Library module
https://ffcraftland.garena.com/en/docs/module-1
Official STD Library components/properties and API names.

List module
https://ffcraftland.garena.com/en/docs/module-2
Official List API names and descriptions.

Type reference
https://ffcraftland.garena.com/en/docs/type
Official Type list; includes many game/UI/resource types.

Enum reference
https://ffcraftland.garena.com/en/docs/enum/
Official Enum reference index.

Event reference
https://ffcraftland.garena.com/en/docs/event/
Official Event reference.

Mobile tutorial: Block Script
https://ffcraftland.garena.com/en/tutorial/cl/3
Mobile tutorial covering block editor and logic.

PC user manual
https://ffcraftland.garena.com/en/tutorial/fe/1
PC user manual sections.

PC additional script notes
https://ffcraftland.garena.com/en/tutorial/fe/1-10/
IF/ELSE, loops, break/continue, code script notes.

Create Level Object API
https://ffcraftland.garena.com/en/docs/api-26-49
Declaration and input/output details.

Map New API
https://ffcraftland.garena.com/en/docs/api-3-549
Map New API page.

Map Obtain API
https://ffcraftland.garena.com/en/docs/api-3-550
Map Obtain parameters and return.

Map Set API
https://ffcraftland.garena.com/en/docs/api-3-551
Map Set API page.

Return API
https://ffcraftland.garena.com/en/docs/api-1-26/
Return API page.

Paste Component API
https://ffcraftland.garena.com/en/docs/api-1-951/
PC-only API example.

Add Script API
https://ffcraftland.garena.com/en/docs/api-1-471/
Add Script API page.
